

Flat Glass

TB403 Brett Martin Flat Glass Datasheet

Product Description

Brett Martin Daylight Systems' Flat Glass Rooflights are individual glass rooflights intended for installation on flat roofs of all modern building types to provide natural light (and ventilation where specified). Brett Martin Flat Glass Rooflights are manufactured to ISO 9001 industry standards.

Brett Martin Flat Glass exhibits a sleek and contemporary design with a slimline powder coated frame and flush fitting glass panel. All fixed Brett Martin Flat Glass rooflights achieve Secured by Design accreditation.

Design Features

- Premium rooflight offering a robust build as well as protection against intrusion or vandalism.
- Powder coated aluminium frame as standard (RAL 7016).
- Centre pane U-value of 1.1 W/m²K.
- Components of powered opening rooflights (230V) are completely concealed for an unobstructed light well.
- Tested to be non-fragile to CWCT TN-67 (for class 1 roofs)* and Class B non-fragile to ACR[M]001.
- For ease of installation, the tapered kerb foot does not require timber fillets and an integral clamp holds the roofing membrane in place and provides a clean external finish for all roofing types.
- Fixed rooflights achieve Secured by Design accreditation.

Product Options Summary

Hinged Opening

- Manual opening
- Powered with wall-switch (chain actuator)
- Optional Remote Controlled Operation
- Optional Rain Sensor Operation

Optional Ventilation

- Manual Hit-and-Miss
- Automatic Humidity Controlled

Glazing Type, Flat Glass

- 6mm toughened outer, 90% Argon filled cavity, Inner pane laminated with 1.5mm PVB interlayer & soft coat Low E coating.
- (NB - inner pane thickness varies with size)
- CWCT TN-67 for class 1 roofs*
- ACR[M]001 Class B non-fragile
- Glass panel is P4A secure

Size (roof opening)

Standard range:
see Table on Page 3
In square and rectangular combinations.

Optional Security Grille

*Class 2 for large size rooflights, see table on page 3.

Flat Glass

TB403 Brett Martin Flat Glass Datasheet

Composition

The double glazed glass panel is made up of: 6mm toughened outer, a 90% argon filled cavity, with a laminated inner (inc. 1.5mm PVB interlayer). The inner pane thickness varies with rooflight size, see table on page 3. All double glazed units include a soft coat Low E coating.

The frame is extruded aluminium, with a powder coating (RAL 7016) to provide a premium appearance and highly appealing finish, and is thermally isolated to provide excellent thermal performance. The kerbs are manufactured from Lead & Cadmium free un-plasticised PVC rigid multi-wall extruded profile, with internal white finish. The Glass, PVC-U and Aluminium which comprise the product can be recycled at the end of useful product life.

Durability

Brett Martin Flat Glass units are expected to remain fit for purpose in normal industrial conditions for a period of 20 years (guaranteed for 10 years), i.e. they will not become perforated, lose significant structural integrity or distort to the extent of losing weather-tightness. Electrical actuators (where present), are guaranteed for a period of 1 year; actuators have a design life of at least 10,000 cycles. Insulated glass used in the construction of the rooflight is guaranteed for 5 years.

Safety Requirements and CDM

Brett Martin Flat Glass achieves CWCT TN-67 non-fragility for class 1 roofs* and ACR[M]001 class B non-fragility when new and fully installed in accordance with Brett Martin Daylight Systems' installation guides. Foot traffic on rooflights should always be avoided; impacts such as foot traffic or a falling person may cause damage which could necessitate rooflight replacement. All glass panels are BS EN12150, BS 14449 and BS 1279 compliant.

*Class 2 for large size rooflights, see table on page 3.

Security

All fixed Brett Martin Flat Glass units are fitted to a structural, insulated builders upstand or a PVC kerb using self-drilling fixings concealed using colour-matched cover caps. Fixed variants are accredited by Secured by Design based on independently assessed testing in accordance with PAS24:2016. Optional security grilles are designed to fit beneath the foot of the kerb to provide additional security where required.

Fire Ratings

Building Regulations Approved Document B (2019 edition, amended 2020) sets out the rules for fire safety of buildings, which can be met by achieving specific fire ratings to European (BS EN 13501) test standards.

Glass is designated Class A to EN13501 part 1, as it is included in the list of CWFT (classified without further test) materials published in the Official Journal of the EU (see European Commission Decision 96/603/EC).

Brett Martin Flat Glass Rooflights are deemed to achieve Class B_{ROOF}(t4) to EN13501 part 5 by Approved Document B of the Building Regulations (see Approved Document B1 paragraph 12.8 and Approved Document B2 paragraph 14.8).

These classification mean there is no restriction on where Brett Martin Flat Glass rooflights can be used on roofs of buildings in England.

Roof Applications

Brett Martin Flat Glass units are suitable for flat roof applications with a pitch of 2°-15°. 2° is typical for a 'flat roof'. If a roof is less than 2°, packers (not supplied) will need to be placed under the kerb of the unit or on the top of a builders upstand to raise to the minimum 2°. This is to prevent water ponding on the glass leading to rapid dirt build up. A minimum of 4° pitch is required for sizes where both the length and width are larger than 1650mm, see table on page 3.

Key		
Colour	Inner Pane Thickness	Non-fragile CWCT-67
	7.5 or 9.5mm	Class 1 roofs
	9.5mm	Class 2 roofs
	11.5mm	Class 2 roofs

Size Restrictions

Please note that restrictions apply due to size, wind loadings and weight. For fixed units with a PVC kerb, the maximum size is 2000mm x 2000mm (square) and 2850mm x 1650mm (rectangle). For powered opening rooflights, size is normally restricted to a maximum of 1200mm x 1200mm (square) and 1500mm x 1000mm (rectangle). Size of the largest manual opening rooflight is restricted to 1200mm x 1200mm.

Opening Options

Brett Martin Flat Glass can be opened on concealed hinges using actuators to create a large ventilation area. Opening rooflights can contribute to room ventilation as required by Approved Document F of the Building Regulations.

Opening Options			
Opening Type	Description	Geometric Ventilation Area	
		Min	Max
Manual Opening (MLD)	Hinged opening rooflight which is operated manually via a worm gear drive with an extension pole	0.300 m ²	0.683 m ²
Powered Opening (PCD/PCR)	Powered hinged opening rooflight with completely concealed operating mechanism. Opened and closed using a control switch or remote control	0.211 m ²	0.725 m ²
Sensor Controlled Powered Opening (PCS)	Powered hinged opening rooflight which includes rain sensors for automatic operation	0.211 m ²	0.725 m ²

Ventilation

Ventilation can help reduce humidity, and reduce risk of condensation and should be considered in any areas of high humidity. Brett Martin Flat Glass rooflights may be unvented or can incorporate vents. These can either be hit-and-miss manually controlled trickle vents or automatic humidity controlled vents and are available in all sizes where a PVC kerb is an option.

Ventilation Options		
Ventilation Type	Description	Rating
Trickle Ventilation (Hit-and-Miss)	Manually operated trickle ventilation provides background ventilation to the interior	Provides 8400mm ² Equivalent Area Ventilation
Automatic Humidity Controlled Trickle Ventilation	Humidity controlled trickle ventilation is sensor controlled to open and close in response to room humidity levels	Provides 7822mm ² Equivalent Area Ventilation and provides superior protection against condensation

Brett Martin Flat Glass
Datasheet

Security Grille Option

Designed to fit beneath the foot of the kerb to provide additional security where required. It is powder coated in a white finish, and available in all sizes where a PVC kerb is an option.

Glazing Specification

Brett Martin Flat Glass comes with a 7.5mm, 9.5mm or 11.5mm laminate inner as standard. Other glazing options are available on request. If non-standard glass is used, glazing performance may differ from the table shown.

Overall Glazing Performance			
Light		Solar Energy	
Transmission	77% - 78%	G-Value	0.56 - 0.58
Reflection	12%	Shading coefficient	0.64 - 0.66

Thermal Performance

Brett Martin Flat Glass achieves a U_d -value (defined in accordance with NARM NTD02) of 1.16 to 1.66 W/m^2K and a centre pane U-Value of 1.1 W/m^2K which exceeds requirements of Approved Document L of the Building Regulations.

Thermal Performance			
Rooflight Variant	Centre Pane U-Value (W/m^2K)	Size	U_d -Value (W/m^2K)
Unvented, Fixed Rooflight on Builder's Upstand	1.1	600 x 600	1.66
		3600 x 1650	1.24
Vented or Opening Rooflight on Builder's Upstand	1.1	600 x 600	1.57
		2850 x 1650	1.28
Rooflight With 150mm Kerb	1.1	600 x 600	1.29
		2850 x 1650	1.20
Rooflight With 300mm Kerb	1.1	600 x 600	1.20
		2850 x 1650	1.16

Acoustic Performance

Brett Martin Flat Glass units achieve a direct airborne sound insulation value of 38db (Rw). This value can be improved further by the fitting of a kerb acoustic pack. The acoustic pack is not available with vented or opening options.

Wind and Snow Loads

Brett Martin Flat Glass has been tested to show that, when correctly fitted in accordance with our instructions, will resist wind loads calculated in accordance with BS EN 1991-1-4: 2005, and imposed loads in accordance with BS EN 1873: 2005.

Resistance to Snow and Wind Loads (Figures in excess of)	
Snow Load (N.m ²)	1200
Wind Load (N.m ²)	2400

Thermal Fractures

Brett Martin Flat Glass rooflights are manufactured using double glazing which includes an inner pane of annealed, laminated safety glass, which is essential for ensuring the safety of those above the rooflight through non-fragility, and those below the rooflight through the prevention falling glass from accidental breakage.

In some circumstances, annealed, laminated safety glass can be subject to thermal stress fracture in the event of uneven heat build-up directly under the glass. Installation of blinds, or any other alterations made to the lightwell below the rooflight, must be done so with consideration to the risk of thermal stress fracture. In the case of blinds, the risk of thermal stress fracture can never be fully removed, but it can be reduced by choosing light coloured blinds, positioning them as far away from the glass as possible, and adding ventilation to the rooflight specification.

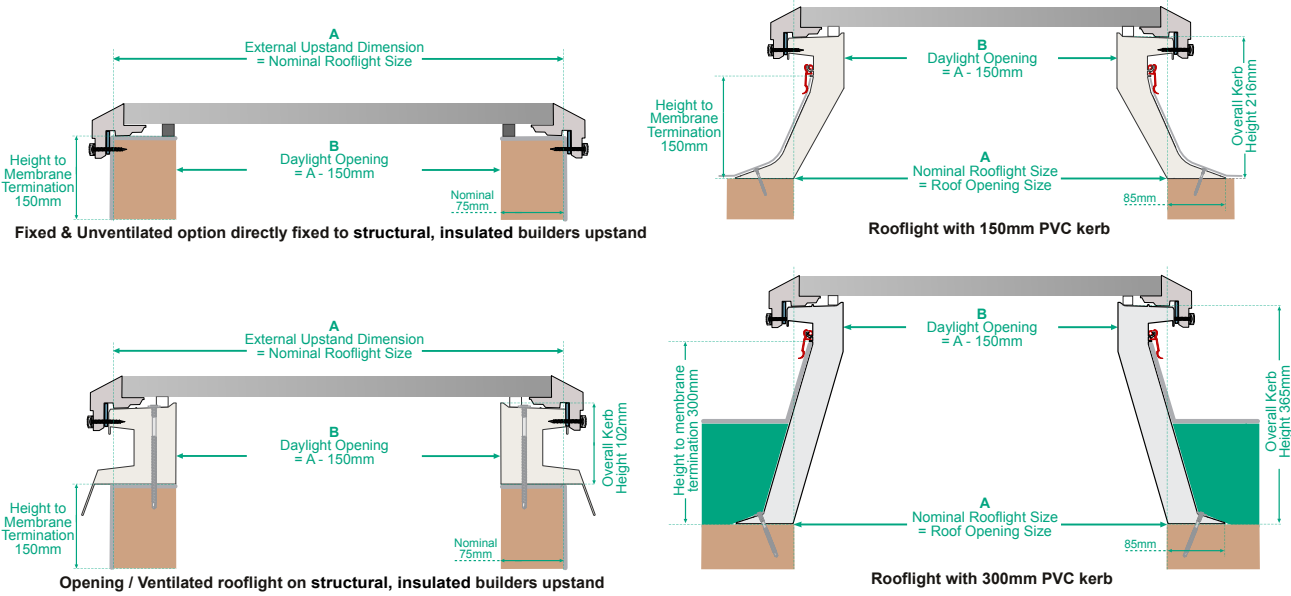

More detailed guidance can be obtained upon request - please contact the technical department.

Datasheet

Product Dimensions

Brett Martin Flat Glass offers differing kerb options depending on project specification. When the rooflight is to be fitted to an existing upstand, fixed unventilated rooflights can be fitted directly, and opening or ventilated options are supplied complete with an adapter kerb. Where no upstand exists, Brett Martin Flat Glass can be supplied with 150mm PVC kerb (for mounting at roof surface level) or 300mm PVC kerb (for mounting below insulation).

Product Overall Height & Weight			
Rooflight Variant	Nominal Size	Height (mm)	Weight (kg)
Unvented, Fixed Rooflight on Structural, Insulated Builder's Upstand	600 x 600	82	18
	3600 x 1650		264
Vented or Opening Rooflight on Structural, Insulated Builder's Upstand	600 x 600	185	23
	2850 x 1650		210
Rooflight With 150mm Kerb	600 x 600	259	25
	2850 x 1650		220
Rooflight With 300mm Kerb	600 x 600	407	28
	2850 x 1650		228
